This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.
This equipment has been tested and found to comply with the limits for a Class B digital device pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

If necessary, the user should consult the dealer or an experienced radio/television technician for additional suggestions. The user may find the following booklet helpful: “Something About Interference.” This is available at FCC local regional offices. Our company is not responsible for any radio or television interference caused by unauthorized modifications of this equipment or the substitution or attachment of connecting cables and equipment other than those specified by our company. The correction is the responsibility of the user. Use only shielded data cables with this system.

5Ghz band: UNII (Unlicensed National Information Infrastructure) or band 1 (5.150 to 5.250 GHz) is restricted to indoor use only. Any other use will make the operation of the device illegal.

Caution! - Any changes or modifications not expressly approved by the grantee of this device could void the user’s authority to operate the equipment.

Canadian Compliance

This Class B digital apparatus complies with Canadian ICES-003. Operation is subject to the following two conditions:

1. This device may not cause harmful interference.
2. This device must accept any interference received, including interference that may cause undesired operation.

5Ghz band: UNII (Unlicensed National Information Infrastructure) or band 1 (5.150 to 5.250 GHz) is restricted to indoor use only. Any other use will make the operation of the device illegal.

For body worn operation, this phone has been tested and meets the FCC RF exposure guidelines for use with the following body worn accessory: Holster-1. Use of other accessories may not ensure compliance with FCC RF exposure guidelines.

Caution! - Any changes or modifications not expressly approved by the grantee of this device could void the user’s authority to operate the equipment.

Conformité à la réglementation canadienne

Cet appareil numérique de la Classe B est conforme à la norme NMB-003 du Canada. Son fonctionnement est assujetti aux conditions suivantes:

1. Cet appareil ne doit pas causer de brouillage préjudiciable.
2. Cet appareil doit pouvoir accepter tout brouillage reçu, y compris le brouillage pouvant causer un fonctionnement indésirable.
Bande 5 Ghz: UNII (Infrastructure Nationale d'Information Sans Permis) ou Bande1 (5.150 à 5.250 GHz) est limitée à l'usage intérieur seulement. Toute autre utilisation rendra l'opération de l'appareil illégal.

For body worn operation, ce téléphone a été testé et respecte les directives d'exposition RF de la FCC pour une utilisation avec l'accessoire body worn: Holster-1. L'utilisation de d'autres accessoires risque de ne pas assurer la conformité avec les directives d'exposition RF de la FCC.

**Mise en garde!** - Tout changement ou modification non expressément approuvées par le bénéficiaire de cet appareil peut annuler l'autorisation d'utiliser l'équipement.

**RF Exposure Information (SAR)**

This mobile phone meets the government's requirements for exposure to radio waves. This phone is designed and manufactured not to exceed the emission limits for exposure to radio frequency (RF) energy set by the Federal Communications Commission of the U.S. Government.

The exposure standard for wireless mobile phones employs a unit of measurement known as the Specific Absorption Rate, or SAR. The SAR limit set by the FCC is 1.6W/Kg and for Europe 2W/Kg. Although the SAR is determined at the highest certified power level, the actual SAR level of the phone while operating can be well below the maximum value. This is because the phone is designed to operate at multiple power levels so as to use only the power required to reach the network. In general, the closer you are to a wireless base station antenna, the lower the power output.

The highest reported SAR values for head, body-worn accessory and simultaneous transmission use conditions are: 0.45 W/kg (1g), 0.96 W/kg (1g) and 1.33 W/kg (1g).

The highest reported CE SAR values for head, body-worn accessory and simultaneous transmission use conditions are: 0.59 W/kg (10g), 1.0 W/kg (10g), 1.15 W/kg (10g).

While there may be differences between the SAR levels of various phones and at various positions, they all meet the government requirement.

The FCC has granted an Equipment Authorization for this model phone with all reported SAR levels evaluated as in compliance with the FCC RF exposure guidelines. SAR information on this model phone is on file with the FCC and can be found under the Display Grant section of www.fcc.gov/oet/ea/fccid after searching on FCC ID: HD570eLGN, HD570eLG0 and HD570el00.

For body worn operation, this phone has been tested and meets the FCC RF exposure guidelines for use with the following body worn accessory: Holster-1. Use of other accessories may not ensure compliance with FCC RF exposure guidelines.

**Honeywell Scanning & Mobility Product Environmental Information**

Refer to www.honeywellaidc.com/environmental for the RoHS / REACH / WEEE information.
China RoHS

Pacemakers, Hearing Aids and Other Electrically Powered Devices

Most manufacturers of medical devices adhere to the IEC 601-1-2 standard. This standard requires devices to operate properly in an EM Field with a strength of 3V/m over a frequency range of 26 to 1000MHz. The maximum allowable field strength emitted by the Dolphin terminal is 0.3V/m according to Subpart B of Part 1 of the FCC rules. Therefore, the RF from the Dolphin terminal has no effect on medical devices that meet the IEC specification.

Hearing Aid Compatibility (HAC)

Dolphin 70e Black models 70eLGN and 70eLG0 have been tested for hearing aid compatibility. These devices have an M4 and T4 rating. For additional HAC information, including the HAC rating for this product, please refer to www.honeywellaidc.com.

When some wireless devices are used near some hearing devices such as hearing aids and implants, users may detect a buzzing or humming noise. Some hearing devices are more immune than others to this interference noise. Wireless devices may also vary in the amount of interference they generate.

The ratings for compatibility of digital wireless devices with hearing aids are described in the American National Standards Institute (ANSI) C63.19 standard:

M-Rating: Phones rated M3 or M4 meet FCC requirements and are likely to generate less interference with hearing devices than phones that are not labeled. M4 is the superior/higher of the two ratings.

T-Rating: Phones rated T3 or T4 meet FCC requirements and are likely to be more usable with hearing devices’ telecoil than unrated phones. T4 is the superior/higher of the two ratings.

The more immune the hearing aid device is, the less likely one is to experience interference noise from the wireless phone. Hearing aid devices may also be rated. Adding the ratings of the hearing aid and the phone would determine probable usability:

- Any combined rating equal to or greater than six offers the best use.
- Any combined rating equal to five is considered normal use.
The ratings are not guarantees. Results will vary depending on the user's hearing device and hearing loss. If your hearing device happens to be vulnerable to interference, you may not be able to use this device successfully. Trying out this device with your hearing device is the best way to evaluate it for your personal needs.

This device has been tested and rated for use with hearing aids for some of the wireless technologies that it utilizes. However, there may be some newer wireless technologies used in this phone that have not been tested yet for use with hearing aids. It is important to try the different features of this phone thoroughly and in different locations, using your hearing aid or cochlear implant, to determine if you hear any interfering noise. Consult your service provider or the manufacturer of this phone for information on hearing aid compatibility.

**Microwaves**

The radio in the Dolphin RF terminal operates on the same frequency band as a microwave oven. Therefore, if you use a microwave within range of the Dolphin RF terminal you may notice performance degradation in your wireless network. However, both your microwave and your wireless network will continue to function.

Initial Setup for Dolphin 70e Black Terminal

Step 1. Install the Battery

Note: Before installing the main battery, read the Guidelines for Battery Pack Use and Disposal on page 3-16.

The terminal is shipped with the battery packaged separate from the unit. To install the battery, first identify your model type, and then follow the installation steps on the pages indicated below.

Identifying Your Model Type

Dolphin 70e Black model terminals equipped with a battery door lock are designed for use with battery part numbers BAT-STANDARD-02 (Li-ion 3.7V, 6.179 watt hour) and BAT-EXTENDED-02 (Li-ion 3.7V, 12.358 watt hour) manufactured for Honeywell International Inc. See page 2-2 for battery installation instructions.
Dolphin 70e Black model terminals **not equipped with a battery door lock** are designed for use with battery part numbers BAT-STANDARD-01 (Li-ion 3.7V, 6.179 watt hour) and BAT-EXTENDED-01 (Li-ion 3.7V, 12.358 watt hour) manufactured for Honeywell International Inc. See page 2-3 for battery installation instructions.

### Installing the Battery in Terminals Equipped with a Battery Door Lock

The terminal is shipped with the battery packaged separate from the unit. Perform the steps illustrated below to install the battery.

*Note:* If your Dolphin 70e Black model type does not have a battery door lock, refer to the battery installation instructions on page 2-3.

- Ensure all components are dry prior to placing the battery in the terminal. Mating wet components may cause damage not covered by the warranty.

**Important** - All battery and connector doors must be present, undamaged, and properly closed to maintain the environmental rating of the terminal.

For information on how to remove the battery, see **Replacing the Battery** on page 2-15.
**Installing the Battery in Terminals without a Battery Door Lock**

The terminal is shipped with the battery packaged separate from the unit. Perform the steps illustrated below to install the battery.

*Note: If your Dolphin 70e Black model does not have a battery retention strap, refer to the battery installation instructions on page 2-2.*

Ensure all components are dry prior to placing the battery in the terminal. Mating wet components may cause damage not covered by the warranty.

*Note: Standard battery and standard battery door shown.*

1. Apply pressure to the edges of the battery door to ensure the door is properly closed.

---

**Important** - All battery and connector doors must be present, undamaged, and properly closed to maintain the environmental rating of the terminal.

For information on how to remove the battery, see Replacing the Battery on page 2-15.
Step 2. Charge the Battery

The power source for the Dolphin terminal is the 3.7V Li-ion rechargeable battery located under the battery door on the back panel of the device. See Battery on page 3-12 for additional information on battery storage, use, and disposal.

**Important:** Removing the battery from the terminal erases all non-persistent memory. Always place the terminal in Suspend mode before removing the battery. For information on how to remove the battery from the terminal, see Replacing the Battery on page 2-15.

Before Initial Use

Dolphin terminals ship with the battery significantly discharged of power. After installing the battery in the terminal, charge the battery with a Dolphin 70e Black charging peripheral for a minimum of **4 hours** for the standard battery pack or **6 hours** for the extended battery pack. When using the 70e-USB Charge/Communication cable to charge from a 500mA USB port on a host device, charge the battery for a minimum of **6 hours** for the standard battery and **8 hours** for the extended battery.

Note: Inadequate source current may interfere with effective battery charging; see Important Charging Guidelines on page 3-13 for additional information.

- We recommend use of Honeywell peripherals, power cables, and power adapters. Use of any non-Honeywell peripherals, cables, or power adapters may cause damage not covered by the warranty.

Dolphin 70e Black model terminals are designed for use with the following charging devices and cables: 70e-HB, 70e-CB, 70e-EHB, 70e-NB, 70e-MB, 70e-MC, and 70e-USB ADAPTERKIT. See pages 3-2 and 3-3 for additional information on Dolphin 70e Black peripherals and accessories.

- Ensure all components are dry prior to mating terminals/batteries with peripheral devices. Mating wet components may cause damage not covered by the warranty.

Using the USB Charge/Communication Cable (Model 70e-USB ADAPTERKIT)

Dolphin 70e Black terminals ship with a USB Charge/Communication Cable and a power adapter with regional plug adapters. The USB Charge/Communication cable provides two options for charging the terminal. Use the cable in conjunction with the provided power supply adapter and plug adapter to charge the terminal from a power outlet (Option 1 on page 2-5) or connect the cable to a high-power USB port to charge from a host device (Option 2 on page 2-5).

**Warning** - The terminal shall only be connected to CTIA certified adapters, products that bear the USB-IF logo or products that have completed the USB-IF compliance program when using the micro USB port as a charging source.
Option 1: Charging from a power outlet
Use only a UL Listed power supply, which has been qualified by Honeywell with an output rated at 5VDC and 1A with the device.

Option 2: Charging from a high power USB port on a host device (PC)
Charging the battery through a USB port takes more time than direct charging using the provided power supply. Inadequate source current may lengthen the charge time or prevent the battery from charging if the terminal is drawing more current than supplied by the USB port. The maximum current supplied by a USB Host can vary from 100mA to 500mA. Do not attempt to charge the terminal from a 100mA source. An active Dolphin terminal uses more current than supplied by a 100mA source causing the terminal to continue to draw power from the battery. See Important Charging Guidelines on page 3-13 for additional information.

Note: Placing the terminal in Suspend mode while charging reduces the current draw of the terminal and shortens the charging time of the battery.

Touch All Apps > Settings > Battery to verify the battery is charging.
Step 3. Boot the Terminal and Access the Home Screen

The terminal begins the boot process as soon as power is applied. Do not press any buttons or attempt to remove the battery during the initial boot process.

The Welcome Screen

The first time you power up the Dolphin terminal, a Welcome screen appears after the boot process is finished. From the Welcome screen follow the prompts as the Setup Wizard guides you through:

- setting the default language for the terminal,
- setting up Wi-Fi network connections,
- connecting to an existing Gmail™ account or creating a new Gmail account
- setting the time, date, and time zone,
- turning the Google Location Service™ on or off
- personalizing (naming) the terminal, and
- selecting your preference for automatic updates from Google™ and reviewing the Google privacy policy.

After the initial Setup Wizard is complete the Locked Screen (see page 2-6) displays.

Note: Once you complete the initial Setup Wizard, the Welcome screen no longer appears when you reboot the device. The Locked screen displays after the terminal completes the boot process.

The Locked Screen

Drag the to the right or press the Menu button to unlock the display and access the Home screen.

See Screen Security on page 6-5 for information on customizing the screen lock/unlock security feature.

Note: During the initial charging stage, the terminal may have entered Suspend Mode to conserve battery power. In Suspend mode the touch screen dims then darkens automatically after a period of no activity.

Press the Power button to wake the terminal. See Display Settings on page 6-2 to adjust the screen sleep (timeout) settings.
The Home Screen

The Android™ operating system provides space for user customization and control with five Home Screen panels.

Note: Some of the features listed below are specific to Dolphin 70e Black models equipped with Google Mobile™ Services and may require an active Google account be setup on your terminal.

Note: You can return to the Home screen at any time, in any application by pressing the button.

Status Bar

The status bar located at the top of the touch screen displays notifications (on the left), the status of various system functions (on the right), and the current time (on the far right).
Notification Panel

A plus sign icon appears on the status bar when the quantity of notifications exceed the available space on the bar. To view all the notifications, touch and hold the status bar, and then drag down to open the notification panel.

Touch and hold the status bar, and then drag down to view notifications.

Tap a notification to open the related application.

The content of the keyboard may vary depending on the application in use and the input field requirements. The enhanced Honeywell virtual keyboard is fully customizable using the Honeywell Virtual Keypad Creator and is the selected as the default method for entering text. See Language & input on page 6-7 for additional information on configuring keyboard & input methods.

**The Enhanced Honeywell Virtual Keyboard**

During text input, you may need to switch between keyboard modes to access additional character sets (e.g., function keys, symbols, and numbers). Each keyboard mode, includes navigation keys, which allow you to quickly switch between modes. Touch the ABC key to switch to the Qwerty Mode, the 123 key to switch to the Numeric Mode, and the ## & key to switch to the Function & Symbols Mode.

Note: The content of the keyboard and the mode initially displayed may vary depending on the application in use and the input field requirements.
Alternate Keys

Some keys include a second symbol in red. In order to use the alternate symbol, touch and hold the key until the alternate symbol appears, and then release the key to type the symbol.

**Honeywell Virtual Keypad Creator**

The default enhanced Honeywell virtual keyboard is fully customizable using the Honeywell Virtual Keypad Creator software available for download at [www.honeywellaidc.com](http://www.honeywellaidc.com). The user-friendly utility allows you to personalize multiple keyboard features including key position, size, quantity, color, and the keyboard skin. In addition, you can make language changes, create alternate or function keys for special character sets, and add application launch keys to streamline common business tasks.

There are two software components required for customizing the enhanced Honeywell Virtual keyboard.

- The first is the Honeywell Virtual Keypad Creator, which resides on your PC and is used to design, save, and download custom keyboard layouts to your Dolphin terminal.

- The second is the enhanced Honeywell virtual keyboard file HoneywellVK.xml, which is located in the \mnt\SDcard\HoneywellVK folder on your Dolphin terminal. This keyboard file is what displays on the terminal screen when the enhanced Honeywell virtual keyboard is selected as the default virtual keyboard; see Language & input on page 6-7.

The customization process is easy,

1. Download and install the Honeywell Virtual Keypad Creator software onto your PC.
2. Connect your Dolphin terminal to your PC using the USB charge/communication cable provided.
3. Configure the terminal for USB debugging and the installation of Unknown sources (non-Market apps).
   a. Touch All Apps > Settings > Developer Options. Check USB debugging.
   b. Touch All Apps > Settings > Security. Check Unknown sources.
4. Open the Virtual Keypad Creator software on your PC.
5. Select Android from the Device menu, and then Yes to confirm changing the device platform.
6. Open and modify the standard layout or create a new layout.
   **Note:** Select Help > Contents or click the Help icon for detailed information on how to open, modify and create new keypad layouts.
7. Select File > Save As.
   **Note:** The Save button overwrites the default keypad template provided with the software with any changes you have made to the layout. Make a backup copy of the template or use the Save As option if you want to keep the provided default template for later use.
8. Select Device > Update Configuration. Follow the prompts to install the custom enhanced virtual keyboard on your terminal.
Turning Power On/Off

To turn the terminal **On**, press and release the **Power** button.

To turn the terminal **Off**:

1. Press and hold the **Power** button until the **Phone Options** menu displays.
   
   **Note:** If the **Show System Dialog** setting is turned off (see page 6-2), the **Phone Options** menu does not display when you press and hold the Power button. The terminal automatically reboots when Power button is held for approximately 8 seconds.

2. Touch **Power Off**.

Suspend Mode

**Suspend** mode differs from **Power off** mode. **Power off** mode is the equivalent to having no battery or external power source connected to the device. The terminal does not receive incoming calls when power is off since the device completely shuts down. In **Suspend** mode, the device enters a low power state to conserve battery power. The radio associated with the phone maintains enough power to wake the terminal for incoming phone calls.

**Suspend** mode automatically turns the touch screen off and locks the terminal to save battery power when the terminal is inactive for a programmed period of time.

1. Press and release the **Power** button to toggle the terminal in or out of **Suspend** mode.
   
   **Note:** If the **Power key** setting has been turned off (disabled), pressing and releasing the key has no effect. See **Display Settings** on page 6-2.

2. Drag the lock icon to the right or press the **Menu** button to unlock the terminal.

**Note:** You should always place the terminal in **Suspend** mode before removing the battery. For information on removing the battery, see **Replacing the Battery**.

To adjust the timeout limit, touch **All Apps** > **Settings** > **Display** > **Sleep**.

Airplane Mode

Turn On Airplane mode to disable all the terminal radios that transmit voice or data.

1. Press and hold the **Power** button until the **Phone Options** menu displays.

   **Note:** If the **Show System Dialog** setting is turned off (see page 6-2), the **Phone Options** menu does not display when you press and hold the Power button. The terminal automatically reboots when Power button is held for approximately 8 seconds.

   To enable **Airplane mode when the **Show System Dialog** setting is off, touch **Settings** > **Wireless & Networks** heading, select **More**. Check the box next to **Airplane Mode**.

2. Touch **Airplane Mode** to toggle the mode on or off.

**Note:** When Airplane Mode is turned on, shows on the status bar.
Replacing the Battery

Note: Before replacing the battery, read the Guidelines for Battery Pack Use and Disposal on page 3-16.

Identifying Your Model Type

Dolphin 70e Black model terminals equipped with a battery door lock are designed for use with battery part numbers BAT-STANDARD-02 (Li-ion 3.7V, 6.179 watt hour) and BAT-EXTENDED-02 (Li-ion 3.7V, 12.358 watt hour) manufactured for Honeywell International Inc. See battery replacement instructions below.

Dolphin 70e Black model terminals not equipped with a battery door lock are designed for use with battery part numbers BAT-STANDARD-01 (Li-ion 3.7V, 6.179 watt hour) and BAT-EXTENDED-01 (Li-ion 3.7V, 12.358 watt hour) manufactured for Honeywell International Inc. See page 2-17 for battery replacement instructions.

Replacing the Battery in Terminals Equipped with a Battery Door Lock

The following instructions are relevant for Dolphin 70e Black terminals equipped with a battery door lock. If your Dolphin 70e Black terminal does not have a battery door lock, refer to the instructions on page 2-17.

Ensure all components are dry prior to mating terminals/batteries with peripheral devices. Mating wet components may cause damage not covered by the warranty.

Note: The following illustrations depict a standard battery with a standard battery door; however, battery removal/installation procedures are the same for the extended battery and extended battery door.

1. Press the Power button to place the terminal in Suspend mode.
2. Unlock and remove the battery door.

3. Pull the battery latch back and remove the battery.

4. Insert the new battery and install the battery door. Apply pressure to the edges of the battery door to ensure the door is properly closed. Engage the door lock. The terminal begins booting as soon as power is applied.

See battery part number specifications on page 3-12.

**Important** - All battery and connector doors must be present, undamaged, and properly closed to maintain the environmental rating of the terminal.

⚠️ We recommend use of Honeywell Li-ion battery packs. Use of any non-Honeywell battery may result in damage not covered by the warranty.
Replacing the Battery in Terminals Not Equipped with a Battery Door Lock

The following instructions are relevant for Dolphin 70e Black terminals equipped with battery retention strap. If your Dolphin 70e Black terminal does not have a retention strap, but it does have battery door lock, refer to the instructions on page 2-15.

Ensure all components are dry prior to mating terminals/batteries with peripheral devices. Mating wet components may cause damage not covered by the warranty.

Note: The following illustrations depict a standard battery with a standard battery door; however, battery removal/installation procedures are the same for the extended battery and extended battery door.

1. Press the **Power** button ( touted place the terminal in **Suspend** mode.
2. Remove the battery door and release the battery retention strap.

3. Push the battery door latch back to remove the battery. **Do not pull on the battery retention strap when attempting to remove the battery.**

5. Secure the battery retention strap.

6. Install the battery door. Apply pressure to the edges of the battery door to ensure the door is properly closed. The terminal begins booting as soon as power is applied.

**Important** - All battery and connector doors must be present, undamaged, and properly closed to maintain the environmental rating of the terminal.

⚠️ We recommend use of Honeywell Li-ion battery packs. Use of any non-Honeywell battery may result in damage not covered by the warranty.

**Resetting the Terminal**

There are two types of system resets: a **Hard Reset** or a **Factory Reset**. The hard reset preserves all data stored in the file system. Contact a Honeywell technical support representative for information on how to perform a **Factory Reset**. For contact information, see Technical Assistance on page 16-1.

**Hard Reset (Cold Boot)**

A hard reset reboots the device and closes any open applications running in RAM at the time of the reset.

1. Press and hold the **Power** button 🚨 until the **Phone Options** menu displays.

   **Note:** If the **Show System Dialog** setting is turned off (see page 6-2), the **Phone Options** menu does not display when you press and hold the Power button. The terminal automatically reboots when Power button is held for approximately 8 seconds.
2. Touch Reboot.

Note: To perform a Hard Reset if the touch screen has stopped responding, press and hold the Power button for approximately 8 seconds until the terminal starts to reboot. When the reset is complete, the Lock screen displays.

Connecting the Terminal to a Computer via a USB Connection

You can transfer files (e.g., pictures, music, and videos) between your computer and the terminal using the supplied USB Charge/Communication cable or a Dolphin 70e Black HomeBase with a standard USB cable.

Note: The terminal supports Hi-Speed USB communication (USB 2.0) with a maximum data transfer rate of 480 Mbps.

1. Connect the terminal to your computer using the USB Charge/Communication cable supplied.

Note: A USB connection notification appears on the status bar to indicate the hardware connection has been established.

2. Touch Turn on USB storage when the USB Mass Storage screen opens.

3. The computer views the terminal as an external USB storage drive. You can copy, delete and/or move files or folders between the computer and the installed microSD card as you would with any other storage drive (e.g., cut and paste or drag and drop).

4. When you are finished transferring files, follow the proper procedure for your computer’s operating system to safely remove the hardware (e.g., unmount or eject) before attempting to disconnect the terminal from the computer or turning off the USB storage setting. Data corruption may occur if the proper removal processes are not followed.

5. Touch Turn off USB storage.

File Browser Power Tool

File Browser provides a graphical utility to browse the files stored on the terminal and the microSD card.

Touch All Apps > Power Tools > File Browser to open the browser.
Touch a folder name or file name to open the folder or file.  
Note: Due to system permissions, some files cannot be opened. Depending on the associated application(s), a choice of applications may be available to open the file.

Browser Menu

Press the Menu button and touch Home to return to the root folder or Close to exit the File Browser.

Honeywell

The \Honeywell\ folder on the Dolphin terminal's SD card is semi-permanent storage on the terminal. By default, files in this folder are maintained after a reboot; however, there is an option (Settings > Storage > Erase SD card) that clears the contents of the SD card.

Upgrades for the Power Tools and other system software on the Dolphin terminal come in the form of zip files. When the zip files are placed in the \Honeywell\Autoinstall folder on the Dolphin terminal SD card, they are automatically installation after a Hard Reset (see page 2-18) if AutoInstall is enabled (see below). Upgrades are available from Customer Support (see page 16-1) or www.honeywellaidc.com.

Note: To copy the Power Tools upgrade files, an active USB connected session must be initiated between a host workstation and USB storage must be enabled on the Dolphin terminal (see page 2-19).

AutoInstall Settings

Touch All Apps > AutoInstall Settings.

If AutoInstall is enabled, the \Honeywell\Autoinstall folder on the Dolphin terminal SD card is searched for zip files containing applications. Each zip file is compared to the applications presently installed on the Dolphin terminal:

- If the application is not installed, AutoInstall installs the application.
- If the application is already installed, AutoInstall checks to see if the zip file contains a newer version of the application and installs the newer version.
- If the application is already installed and there is not a newer version, AutoInstall ignores the installation file.

If AutoInstall is not enabled, the contents of the \Honeywell\Autoinstall folder are ignored.

The digital microphones provide background noise cancellation for clear audio input.

Important - Do not cover the side microphone with your hand when using the terminal for handset phone calls. Both the front and side microphones must be free from obstruction for the noise cancellation feature to function.

Note: Noise cancellation is only available on WWAN equipped models.

Front Speaker
The front speaker is the receiver for handset voice calls.

Fastener for an Optional Wrist Lanyard or Stylus Tether
The fastener provides access for attaching an optional wrist lanyard or stylus tether.

General Notification LED
The light emitting diode (LED) located above and to the right of the LCD display flashes and illuminates during resets, scanning/imaging, and taking a picture. When the terminal is connected to an AC power source, the LED indicates charging activity. This LED can be programmed by various software applications.

Home Button
By default, the Home button returns you to the Home screen, see page 2-7.

Menu Button
Press the Menu button to access options relevant to the open application.

Right Scan/Image Button
By default, the right button triggers the scanner/imager. You can reassign the button to launch applications or execute commands; see Hotkeys on page 2-12.

Search Button
The Search button initiates a search of the terminal or the Internet, see Search Bar on page 2-10.
Scan Button

The Scan button is centrally located for easy access with the right or left hand. When pressed, the Scan button activates the scanner/imager. The Scan button also functions as a system wake-up control for the terminal. You can reassign the button to launch applications or execute commands; see Hotkeys on page 2-12.

Touch Panel Display

The color 4.3 inch (liquid crystal display (LCD) touch panel is covered with an industrial, protective lens for greater durability. The wide video graphic array (WVGA) display resolution is 800 X 480. The touch panel can be activated with a finger or with the optional stylus.

The touch panel backlight illuminates when the screen is touched. To conserve battery power the touch screen dims then darkens automatically after a period of no activity. Press the Power button, and then drag the unlock icon to the right or press the Menu button to wake the terminal and access the last screen viewed. See Display Settings on page 6-2 for information on how to adjust sleep (timeout) settings.

USB Door/Micro USB Port

The Micro USB port is located under the protective USB door on the right side of the terminal. To access the micro USB port, gently lift the top edge of the door closest to the digital microphone, and then rotate 90° counterclockwise.

The micro USB port in conjunction with the USB Charge/Communication Cable (model 70e-USB) powers the terminal, charges the main battery, and facilitates communication. The micro USB port supports low, full, and high-speed USB v2.0 client communication with a maximum rate of 480 Mbps.

For additional information, see Using the USB Charge/Communication Cable (Model 70e-USB ADAPTERKIT) on page 2-4 and Connecting the Terminal to a Computer via a USB Connection on page 2-19.

WAN Notification LED

The light emitting diode (LED) located above and to the left of the LCD display flashes and illuminates for WAN notifications (e.g., a missed call, new voice mail, SMS message, or email). The notification LED flashes when the terminal is active or stays on steady when the terminal is in Suspend mode.

Battery Retention Strap
Some Dolphin 70e Black models come equipped with a battery retention strap, which in conjunction with the battery latch secures the battery in the battery well. The retention strap attaches to battery once the battery is installed in the terminal. Do not pull on the retention strap while attempting to remove the battery. For information on how to remove the battery, see Replacing the Battery on page 2-15.

Color Camera
The 5.0-Megapixel Resolution color camera provides easy picture and video capture. The camera lens and camera flash are located on the back panel of the terminal.

Camera Flash
The camera flash is located on the back panel of the terminal. When used as a Camera Flash with the terminal's color camera, the flash is controlled by the camera application.

Image Engine Window
The image engine reads and decodes linear, stacked linear (e.g., PDF417), and 2D matrix bar code symbologies. The LED aperture for the imaging engine’s LED aimer is contained behind this window. For more details, see Using the Scan Image Engine on page 4-1.

Memory Card Socket
The memory card socket provides the user with the option to expand the terminal’s memory capacity using microSD or microSDHC memory interfaces. The expansion socket is located under the battery door and battery.

Note: Honeywell recommends the use of Single Level Cell (SLC) industrial grade microSD or microSDHC memory cards with Dolphin terminals for maximum performance and durability. Contact a Honeywell sales representative for additional information on qualified memory card options.

When the battery door and battery pack are properly installed, the card is sealed against moisture and particle intrusion, read/write data is stored securely, and the terminal’s environmental rating is preserved; see Installing a SIM Card and/or Replacing the Memory Card on page 3-17.

Memory Retention Flap
The memory card retention flap locks the memory card in the socket; see Installing a SIM Card and/or Replacing the Memory Card on page 3-17.

Power Button
The Power button located on the top of the terminal initiates multiple functions depending on the length of time the button is pressed.

- A quick press of the button toggles Suspend Mode On or Off. To modify this feature, see Power Key on page 6-2.
- Press and hold the button down for approximately 4 seconds to access the Phone menu to Power Off the terminal, Reboot (Hard Reset) the terminal, enable Airplane Mode, set the Volume of the active speaker to On, Off, or Vibrate. To modify this feature, see Show System Dialog on page 6-2.
- Press and hold the button down for approximately 8 seconds to initiate a manual Reboot (Hard Reset) if the touch screen has stopped responding.

SIM Card Socket
The card socket for the Subscriber Identity Module (SIM) is located under the battery door and main battery. When the battery door and battery are properly installed, the card is sealed against moisture and particle intrusion, read/write data is stored securely, and the terminal’s environmental rating is preserved; see Installing a SIM Card and/or Replacing the Memory Card on page 3-17.

SIM Card Retention Flap
The SIM card retention flap locks the SIM card in the socket; see Installing a SIM Card and/or Replacing the Memory Card on page 3-17.

Volume Control Button
Press the top or bottom of the volume button to raise or lower the volume of the active speaker. Lower the volume all the way down to turn off the volume and enable vibration mode.
The I/O Connector

The I/O connector powers the terminal, charges the main battery, and facilitates communication. Dolphin 70e Black peripherals are designed to work exclusively with this connector. The I/O connector supports low, full, and high speed USB v2.0 communication with a maximum rate of 480 Mbps.

Battery

The primary power source for the Dolphin terminal is the 3.7V Li-ion rechargeable battery located under the battery door on the back panel of the device. Honeywell recommends, you keep the battery in the terminal charged at all times to help prevent data loss. Letting the battery become fully discharged causes the terminal to lose all data in RAM.

Note: All data in RAM is cleared when the battery is removed. Always place the terminal in Standby mode before removing the battery to ensure any changes made are saved to the flash memory.

Replacement Battery Specifications

Dolphin 70e Black model terminals equipped with a battery door lock are designed for use with battery part numbers BAT-STANDARD-02 (Li-ion 3.7V, 6.179 watt hour) and BAT-EXTENDED-02 (Li-ion 3.7V, 12.358 watt hour) manufactured for Honeywell International Inc. See page 2-15 for battery replacement instructions.

Dolphin 70e Black model terminals not equipped with a battery door lock are designed for use with battery part numbers BAT-STANDARD-01 (Li-ion 3.7V, 6.179 watt hour) and BAT-EXTENDED-01 (Li-ion 3.7V, 12.358 watt hour) manufactured for Honeywell International Inc. See page 2-17 for battery replacement instructions.

Important Battery and Battery Door Replacement Guidelines

Follow the guidelines listed below when ordering batteries and/or battery doors.

- Size (e.g., standard or extended): The battery and battery door must be the same size.
- Type (e.g., locking or non-locking): The battery and battery door must match your terminal type. See details above.
- Near Field Communication (NFC) requirements: Use only NFC compatible battery doors with NFC equipped Dolphin models identified with a letter N at the end of the model number (e.g., 70exxN).

We recommend use of Honeywell Li-ion battery packs. Use of any non-Honeywell battery may result in damage not covered by the warranty.

Important - All battery and connector doors must be present, undamaged, and properly closed to maintain the environmental rating of the terminal.
**Charging Options**

Dolphin terminals ship with the battery significantly discharged of power. **Before using a Dolphin terminal for the first time**, charge the battery with a Dolphin charging device for a minimum of **4 hours** for the standard battery and **6 hours** for the extended battery. When using the 70e-USB Charge/Communication cable to charge from a 500mA USB port on a host device, charge the battery for a minimum of **6 hours** for the standard battery and **8 hours** for the extended battery.

When the main battery is installed in the terminal, use one of the following:

- Dolphin 70e Black HomeBase (Model 70e-HB), see page 11-1
- Dolphin 70e Black eBase (Model 70e-EHB), see page 12-1
- Dolphin 70e Black Mobile Base (Model 70e-MB), see page 13-1
- Dolphin 70e Black ChargeBase (Model 70e-CB), see page 14-1
- Dolphin 70e Black Net Base (Model 70e-NB), see page 15-1
- Dolphin 70e Black USB Charge/Communication Cable (Model 70e-USB ADAPTERKIT), see page 2-4

When the main battery is not installed in the terminal:

- Place the battery pack in the Auxiliary Battery Well of the Dolphin 70e Black HomeBase (Model 70e-HB) or the Dolphin 70e Black eBase (Model 70e-EHB).
- Insert the battery in the QuadCharger (Model COMMON-QC), see page 3-2.

**Important Charging Guidelines**

**Source Current Specifications**

Battery charging times can be significantly lengthened or charging may not occur if the terminal is drawing more current than is supplied by the charging peripheral (e.g., HomeBase, eBase, Mobile Base, or ChargeBase), USB wall charger, or USB Host (e.g., workstation PC).
The maximum current supplied through a charging peripheral is 2.0A.
The maximum current supplied by the USB wall charger is 900mA.
The maximum current supplied by a USB Host can vary from 100mA to 500mA.

Do not attempt to charge the terminal from a 100mA source. An active Dolphin terminal uses more current than supplied by a 100mA source causing the terminal to continue to draw power from the battery.

Note: Placing the terminal in Suspend mode while charging reduces the current draw of the terminal and shortens the charging time of the battery.

Touch All Apps > Settings > Battery to verify the battery is charging.

Charging a Severely Low or Completely Discharged Battery

</tr>
</tbody>
</table>

Use one of the following options to charge a severely low or completely discharged battery.

1. Insert the battery into the auxiliary battery well of the HomeBase. When the auxiliary battery LED on the HomeBase turns green, the battery is fully charged.

2. Dock the terminal into the charging well of a peripheral (e.g., HomeBase, eBase, Net Base or ChargeBase). The terminal starts to boot as soon as power is supplied by the base.

   Note: To prevent the possible loss of unsaved data, do not remove the terminal from the base until the battery has sufficiently charged.

   Touch > Settings > Battery to view detailed information on the status of the battery.

3. Charge the terminal from a wall power outlet using the USB Charge/Communication Cable and power supply provided with your terminal. As the battery charges, the general notification LED cycles through green, red, amber and off. The LED continues to cycle until the battery reaches a safe charge threshold and the terminal begins to boot. The length of time before the battery reaches a safe charge threshold varies depending on the extent of the battery discharge.

   Note: If the general notification LED does not start to cycle after approximately 5 seconds when power is applied, press the Power button once.

4. Charge the terminal from a USB host device (PC) using the USB Charge/Communication Cable.

   Note: Inadequate source current may interfere with effective battery charging; see Important Charging Guidelines on page 3-13 for additional information.

As the battery charges, the general notification LED cycles through green, red, amber and off. The LED continues to cycle until the battery reaches a safe charge threshold and the terminal begins to boot. The length of time before the battery reaches a safe charge threshold varies depending on the extent of the initial battery discharge level and the current supplied by the USB charging source.

Note: If the general notification LED does not start to cycle after approximately 5 seconds when power is applied, press the Power button once.
Managing Battery Power

Letting the battery become fully discharged causes the terminal to lose all data in RAM. Honeywell recommends you keep a charged battery in the terminal at all times to help prevent data loss. Removing the battery from the terminal erases all non-persistent memory.

When the terminal is running on battery power (as opposed to external power), warnings are displayed when the battery reaches critical and low battery points.

Checking Battery Power and Monitoring Battery Power Use

Touch All Apps > Settings > Battery to display information the battery status (charging or discharging), the level (percentage) of charge remaining on the battery, and a breakdown of battery usage statistics for any running apps and services.

Storing Batteries

To maintain top performance from batteries, avoid storing batteries outside of the following temperature ranges:

- 14°F to 113°F (-10°C to +45°C) for short term storage of less than one month
- 32°F to 86°F (-0°C to +30°C) for long term storage

Do not store batteries in extremely high humidity. For prolonged storage, do not keep batteries stored in a charger that is connected to a power source.
Guidelines for Battery Pack Use and Disposal

The following are general guidelines for the safe use and disposal of batteries:

- Do not disassemble or open crush, bend or deform, puncture or shred.
- Do not modify or remanufacture, attempt to insert foreign objects into the battery, immerse or expose to water or other liquids, expose to fire, explosion or other hazard.
- Improper battery use may result in a fire, explosion or other hazard.
- We recommend use of Honeywell Li-ion battery packs. Use of any non-Honeywell battery may pose a personal hazard to the user.
- Only use the battery for the system for which it is specified. Do not use a battery in any other manner outside its intended use in Dolphin terminals and peripherals.
- Only use the battery with a charging system that has been qualified with the system per standard IEEE-Std-1725-2006. Use of an unqualified battery or charger may present a risk of fire, explosion, leakage, or other hazard.
- Replace the battery only with another battery that has been qualified with the system per this standard, IEEE-Std-1725-2006. Use of an unqualified battery may present a risk of fire, explosion, leakage or other hazard.
- Replace defective batteries immediately; using a defective battery could damage the Dolphin terminal.
- Never throw a used battery in the trash. Promptly dispose of used batteries in accordance with local regulations.
- Do not short-circuit a battery or throw it into a fire; it can explode and cause severe personal injury. Do not allow metallic conductive objects to contact battery terminals.
- If you observe that the Honeywell battery supplied is physically damaged, please send it to Honeywell International Inc. or an authorized service center for inspection, see Product Service and Repair on page 16-1.
- Battery usage by children should be supervised.
- Avoid dropping the terminal or battery. If the terminal or battery is dropped, especially on a hard surface, and the user suspects damage, send it to a Honeywell International Inc. or an authorized service center for inspection.
- If you are not sure the battery or charger is working properly, send it to Honeywell International Inc. or an authorized service center for inspection, see Product Service and Repair on page 16-1.
- Excessive discharge can degrade battery performance. Recharge the battery when your terminal indicates low battery power.
- Although your battery can be recharged many times, the battery life is limited. Replace it after the battery is unable to hold an adequate charge.
- The Dolphin 70e Black should only be connected via its microUSB connector to CTIA certified adapters, products that bear the USB-IF logo or products that have completed, the USB-IF compliance program.

System Resets

See Resetting the Terminal on page 2-18.

Hardware Maintenance

When needed, clean the image engine window and the touch screen with a clean, non-abrasive, lint-free cloth. The terminal can be cleaned with a damp cloth.

Important - All battery and connector doors must be present, undamaged, and properly closed to maintain the environmental rating of the terminal.
Installing a SIM Card and/or Replacing the Memory Card

SIM Card
Short for Subscriber Information Module, a SIM card stores the subscriber’s personal information, GSM/GPRS radio settings, security keys, contacts, etc. SIM cards can be installed in compatible mobile devices, enabling you to switch devices without losing personal and setup information.

Before installing the SIM card:
- The service provider must activate the SIM card.
- The terminal must be powered Off.

Note: If no SIM card is installed, you can still make emergency phone calls (e.g., 9-1-1).

Memory Card
A microSD memory card is pre-installed in your Dolphin 70e Black powered by Android terminal. You can expand the terminal’s memory capacity by replacing the supplied card with a larger capacity microSD or microSDHC card.

Note: Applications on your Dolphin 70e Black terminal utilize the microSD card to store files and application data. Memory card use is recommended to avoid potential application errors or possible data loss.

Honeywell recommends the use of Single Level Cell (SLC) industrial grade microSD or microSDHC memory cards with Dolphin terminals for maximum performance and durability. Contact a Honeywell sales representative for additional information on qualified memory card options.

Installation and/or Replacement

Note: The following illustrations depict a standard battery with a standard battery door; however, battery removal procedures are the same for the extended battery and battery door.

1. Press the Power button to place the terminal in Suspend mode.

2. If your Dolphin 70e Black model is equipped with a battery door lock:
   a. Unlock and remove the battery door.
   b. Pull the battery latch back and remove the battery.

If your model is not equipped with a battery door lock:
a. Remove the battery door and release the battery retention strap.

b. Pull the battery latch back and remove the battery. Do not pull on the battery retention strap when attempting to remove the battery.

3. Lift the card retention flap for the appropriate socket.

4. If you are replacing the memory card, slide the existing card out of the memory socket.
   
   *Note: Memory card use is recommended to avoid potential application errors or possible data loss.*

5. Slide the SIM and/or replacement memory card (contacts facing down) into the appropriate socket, and then close the retention flap.

6. Insert the battery. Secure the battery retention strap if applicable for your model type.

7. Install the battery door. Apply pressure to the edges of the battery door to ensure the door is properly closed. Engage the battery door lock if applicable for your model type. The terminal begins booting as soon as power is applied.
Using the Scan Image Engine

Overview

The Dolphin 70e Black terminal houses a compact image engine that instantly reads popular 1D and 2D bar codes and supports omni-directional aiming and decoding for greater flexibility in real-world settings. The image engine can also capture black and white digital images, such as signatures and pictures of damaged inventory.

With the latest CMOS-based technology, the engine works like a digital camera and enables black and white digital image capture, signature capture, and reading of OCR characters.

Decoding

The terminal supports image decoding for use in various bar code reading and imaging applications. Full-area imaging provides omni-directional reading of linear and non-linear 1D and 2D bar codes, OCR, signature capture, and picture taking. When reading all bar code types using full-area imaging, a positive read can be obtained from many positions; see Aiming Beam on page 4-6. To achieve the best read, the aiming beam should be centered horizontally across the bar code.
Using the Scan Demo to Decode a Bar Code

The Scan Demo demonstrates the functionality of the integrated scan image engine in the terminal and is not intended as a functional business solution. Detailed information on how to create custom applications for your Dolphin terminal is provided in the Software Development Kit (SDK), available for download at www.honeywellaidc.com.

1. Touch All Apps > Demos > Scan Demo to open the Scan Demo application.
2. Point the Dolphin terminal at the bar code.
   
   **Note:** For optimum performance, avoid reflections by scanning the bar code at a slight angle.

3. Touch and hold Scan or press and hold the Scan button. Center the aiming beam over the bar code; see Aiming Beam on page 4-6.
   
   **Note:** By default, the left and right side buttons also trigger the scan/imager.

4. The bar code is decoded and the results appear on the screen.

1. Slide the Continuous blue button to the ON position to enable the feature.

2. Touch and hold Scan or press and hold the Scan button to activate the imaging engine. The imager scans and decodes bar codes presented in the terminal’s field of view as long as Scan or the Scan button is pressed.

3. Release Scan or the Scan button to deactivate the imager.

4. Slide the Continuous blue button to the OFF position to disable the feature.

Configuring the Scan Demo Application

1. Open the Scan Demo application, and then press the Menu button.

2. Touch Setting or Symbology Setting.

   Touch Symbology Setting to access the Symbologies Settings screen.
3. Modify the settings to meet your application needs, and then press the Back button to return to the Scan Demo screen.

**Settings**

Touch the checkbox to enable or disable a feature.

- **Vibrate** - When checked, the terminal vibrates to indicate a successful bar code scan and decode.

Capturing Images

The image-capture process is an intuitive, split-second operation for experienced users. By following the basic guidelines, new users can easily develop their own technique and, with practice, quickly learn to adapt it to different application environments.

Image Preview

When the imaging process is initiated, the touch screen displays a preview of the object. This is a live video image of what the imager is currently viewing. The live video image has a slightly degraded appearance compared to the captured image. This is normal.

File Formats

File formats supported for image storage include JPEG (JPG) and Portable Network Graphics (PNG). The default file format for images is a grayscale JPG.

Compression

Digital images have a maximum image size of 832 x 640 pixels and may have up to a 256 grayscale image definition.

The image quality and related file size are determined by the data compression method used by the software application used to take images. The average size of the image file is approximately 400–800K. However, the size of the image depends on the content of the image - the more complex the content, the larger the file size.

Taking an Image with the Imaging Demo

The Imaging Demo demonstrates the functionality of the integrated scan image engine in the terminal and is not intended as a functional business solution. Overview

The Dolphin 70e Black has two radio options for WWAN voice and data communications:

- a multi-mode (software definable) WWAN radio, which provides support for three band 3.9G UMTS/HSPA+ (850/1900/2100 MHz), quad band GSM/GPRS/EDGE (850/900/1800/1900 MHz), and dual band CDMA/EVDO Rev A - 1xRTT/EVDO (800/1900 Mhz) or
- a GSM WWAN radio, which provides support for two-band UMTS/HSPA+ (3.9G) 900/2100 Mhz and quad-band GSM/GPRS/EDGE (850/900/1800/1900 MHz).

Requirements

Using GSM/HSPA+/UMTS/GPRS/EDGE requires:

- a network subscription to a GSM/HSPA+/UMTS/GPRS/EDGE network (you need to know what service providers are in your geographic area), and
- an installed SIM card that has been activated by the network service provider (see Installing a SIM Card and/or Replacing the Memory Card on page 3-17).

Using CDMA requires:

- an active account with a CDMA carrier. The account is linked to the Mobile Equipment Identifier (MEID) of the integrated WWAN radio.

Antenna Band

The WWAN radio features two internal antennas: an omni-directional antenna optimized for power output and receiver sensitivity and a second diversity receiver antenna.

GSM

Short for Global System for Mobile communications, GSM is an open, non-proprietary wireless WAN system that is constantly evolving and growing.

HSPA+

Short for High-Speed Download Packet Access, HSPA+ is a non-voice value added service that allows packet-switched data to be instantly sent and received across mobile telephone networks.

UMTS

Short for Universal Mobile Telecommunications System, UMTS is a non-voice value added service that allows packet-switched data to be instantly sent and received across mobile telephone networks.

GPRS

Short for General Packet Radio Service, GPRS is a non-voice value added service that allows packet-switched data to be instantly sent and received across mobile telephone networks.

EDGE

E-GPRS is a non-voice value added service that allows packet-switched data to be instantly sent and received across mobile telephone networks at a higher data rate than standard GPRS.

CDMA

Short for Code Division Multiple Access.

1xRTT

EVDO

Short for Evolution-Data Optimized.
For terminals with the multi-mode (software definable) WWAN radio:

- A penta band antenna supports 850, 1900, 2100 Mhz (UMTS/HSPA), 850/900/1800/1900 Mhz (GSM/GPRS/EDGE) and 800/1900 Mhz (EV-DO/CDMA).
- A diversity receiver antenna supports 850 & 1900Mhz

For terminals with the GSM WWAN radio:

- A penta band antenna that supports 900, 2100 Mhz (UMTS/HSPA) and 850/900/1800/1900 Mhz (GSM/GPRS/EDGE).
- A diversity receiver antenna supports 2100Mhz

**Signal Strength**

On terminals equipped with a voice + data WWAN radio, the signal strength of the connection is indicated by the number of bars that appear in the signal icon located in the Status bar at the top of the screen. The greater the number of bars displayed the greater the signal strength.

**Voice and Data Communication**

Dolphin terminals with an integrated GSM/HSPA+/UMTS/GPRS/EDGE (voice + data) radio are optimized for the following two-way communications:

**Voice:** GSM voice data (dialed-up)

**Data:** Available speed depends on the wireless network carrier and their supported packet-data technology in addition to network conditions.

- **GPRS Class 10:** data transmission max. 85.6 kbps (DL), max. 42.8 kbps (UL)
- **HSPA+:** data transmission max. 14.4 Mbps (DL), max. 5.76Mbps (UL)
- **UMTS:** data transmission max. 384 kbps (DL), max 384 kbps (UL)
- **EDGE (E-GPRS) Class 10:** data transmission max. 237 kbps (DL), max. 118 kbps (UL)

*Note: You can use the GSM radio for simultaneous voice and data communication on a UMTS (3G) network only. On a GSM network, if you want to communicate over the phone (voice), you cannot send data. If you want to send data, you cannot use the phone.*

**Audio Modes**

The Dolphin 70e Black terminal is equipped with speakers on the front and bottom of the terminal and dual microphones that you can use to send and receive audio signals over the GSM network, see [Features of the Dolphin 70e Black](#) on page 3-4.

There are three audio modes:

- **Handset Mode**
  
The front speaker is used for receiving handset voice calls and the digital microphones, located on the front and side panel of the terminal, provide noise cancellation for clear audio input.
- **Headset Mode**
  When a headset is plugged into the Audio Jack, the terminal defaults to the headset for receiving calls and audio input.

- **Hands-Free Mode**
  The bottom speakers are used as a speaker phone. To switch to speaker phone during a call, touch on the phone icon in the tile bar at the bottom of the screen, and then select **Speaker On**.

**Important** - Do not cover the side microphone with your hand when using the terminal for phone calls. Both the front and side microphones must be free from obstruction for the noise cancellation feature to function properly during a handset mode call.

**Volume Control**
Press the up or down arrow on the **Volume Control** button on the left side of the device to adjust the volume of the active speaker, see Volume Control Button on page 3-10.

**Using the Dolphin Terminal as a Phone**

   Note: The Data enabled box must be checked on the Mobile networks screen for data communication using the new APN.

   Note: When the device is on a 2G (EDGE/GPRS) network, a data connection failure occurs if the phone is in use for a voice call while attempting a data connection. Simultaneous voice and data use is only supported if the device is on a 3G network. In 2G mode, a voice call takes precedence over data connections. Active data connections are placed in "park" mode automatically and the data is "retrieved" when the voice call ends.

**Monitoring Data Usage**

To access the Data usage screen, touch All Apps > Settings > Data usage.

The Data usage screen provides access for you to:

Depending on your settings and the network tab selected, the graph may also show a Mobile Data Limit (red horizontal line), and a Data Usage Warning Limit (orange horizontal line). The white vertical lines in the graph indicate the time parameter used to calculate the data usage statistic displayed below the graph. You can modify the time parameter used for the data measurement by dragging the white lines left or right.

Scroll down the screen to view data usage statistics for individual apps using the network selected (e.g., Mobile, Wi-Fi or Ethernet). Each app includes a blue bar that indicates the total data usage for the cycle displayed above the main graph. Touch the app name to view statistics for foreground and background data usage and to access settings specific to the app (e.g., auto-updates, notifications, and user controls).
Setting a Data Usage Warning Limit
You can set the terminal to display a warning message when a specific data usage level is reached. Drag the orange line on the graph to the data level that you want as the trigger for a warning message.

Setting a Data Usage Limit
You can set the terminal to automatically turn Mobile data OFF and notify you when a specific data usage limit has been reached. When you select a data usage limit, take into consideration the following:

- Data usage statistics displayed on the screen are measured by the phone. Your carrier’s data usage accounting may differ.
- When Mobile data is turned OFF, some features and applications on the terminal may not function properly.

### Near Field Communication (NFC) Technology

NFC technology provides the ability for short-range, wireless data transfer between the terminal and NFC tags or other NFC enabled devices placed in close proximity to the back of the terminal.

**Note:** Suspend mode and the screen lock temporarily turns the NFC radio off.

NFC equipped Dolphin 70e Black models support the following modes of operation:

- **NFC tag reader/writer mode**
  The terminal reads and/or writes digital information from or to an NFC tag.

- **Peer-to-Peer (P2P) mode**
  The terminal uses Android Beam and/or Bluetooth technology to transfer screen content (e.g., a picture, contact information, Web page url, or file) between NFC enabled devices.

- **NFC card emulation mode**
  The terminal emulates an NFC card (smart card) that an external card reader can access. Terminal models equipped with NFC technology include the option to enable the embedded secure element (eSE) SmartMX™. Secure element implementation is commonly used for financial transactions or coupon and loyalty mobile marketing applications that require a secure memory and execution environment for the storage of personal information (e.g., account information and credentials) and/or running custom smart card applets.

### Hardware Requirements

NFC functionality is hardware dependent and only available on Dolphin 70e Black models ending with the letter N (e.g., 70exxN). Use only NFC compatible replacement battery doors with NFC equipped Dolphin models.
Security Recommendation
NFC functionality is enabled by default on Dolphin 70e Black models ending with the letter N (e.g., 70exxN). The recommended setting for NFC functionality is disabled until the feature is required. Enabling NFC allows data exchanges between the terminal and other NFC devices or tags. For information on security guidelines and recommendations, see the Dolphin 70e Black powered by Android Network and Security Guide available for download at www.honeywellaidc.com.

NFC Settings
Enabling or Disabling NFC Functionality

1. Touch All Apps > Settings .

4. Touch Select.

5. Choose to browse either the Gallery or Drive for the file.

   *Note: A Google account is required for Google Drive™ online storage service. Additional fees may apply.*

6. Touch the file name or picture thumbnail to send.

   *Note: Once a file is selected, the NFC Bluetooth app screen displays an brief pop-up message to “Ensure devices are near for beaming.” You do not need to touch “Select” again if the picture or file appears on the screen.*

7. Hold the terminals back to back. The sending terminal emits a sound, the screen image shrinks, and the message, “Touch to beam” displays.

   *Note: Both terminals must be unlocked to for NFC detection. If sound is muted, the terminal vibrates when an NFC tag is detected.*

8. Touch the reduced screen image. The terminal automatically initiates a Bluetooth pairing. Once pairing is complete, the file is sent.
The file image and saved location are displayed on the receiving terminal screen when the transfer is successful. By default, the file is saved to the root Honeywell/nfcbtdemo folder of the microSD card.

9. Select the Back button  to exit the demo.
   
   Note: The NFC Bluetooth demo automatically disables Bluetooth technology when the demo is closed.

5. Hold the terminals back to back. The sending terminal emits a sound, the demo screen image shrinks, and the message, “Touch to beam” displays.
   
   Note: Both terminals must be unlocked for NFC detection. If sound is muted, the terminal vibrates when an NFC tag is detected.
6. Touch the reduced screen image to initiate file transfer.
   
   A “File received” message is displayed on the receiving terminal when the transfer is successful. By default, the file is saved to the root Honeywell/nfcbbeamdemo folder of the microSD card.
7. Select the Back button  to exit the demo.
Working with GPS

Overview

The Dolphin 70e Black terminal contains an integrated GPS module that allows location tracking of workers and vehicles, providing better utilization of field assets. Optional mapping and navigation software provides turn-by-turn driving directions and location information.

GPS and AGPS Settings

Touch Location Services from the Settings screen to configure Global Positioning System (GPS) functionality and how apps use your location to improve search results and other services.

There are three settings used to configure how location information is gathered by the terminal:

- **Google’s location service**
  When enabled, the approximate location of the terminal is determined by Wi-Fi and/or mobile networks.

- **GPS satellites**
  When enabled, the integrated global positioning system (GPS) satellite receiver is used to pinpoint the location of the terminal. This option requires a clear view of the sky and additional battery power, which reduces battery life between charge cycles.

- **Use assisted GPS**
  When enabled, the Dolphin 70e Black utilizes gpsOneXTRA Assistance™ Technology to improve time-to-first-fix (TTFF) positioning by using network resources for quicker satellite identification. The carrier agnostic feature downloads a file (approximately 40KB) containing reference data from a Qualcomm® server approximately every 7 days.

  *Note: A data connection is required and data transfer charges may apply depending on your carrier.*

Enable the Location & Google search feature to improve search results and other services by allowing Google applications to utilize location information.

Using the GPS Demo

The GPS Demo demonstrates the main functionality of the integrated GPS module in the terminal and is not intended as a functional business solution. Detailed information on how to create custom applications for your Dolphin terminal is provided in the Software Development Kit (SDK), available for download at www.honeywellaidc.com.

Touch All Apps ➔ Demos 🌍. Swipe right to scroll to GPS Demo, and then touch 🌍. The GPS Demo is organized into three tabs: Heading, Satellites and Logger.

- **Heading**
  Displays current Longitude, Latitude and Altitude of the terminal.

- **Satellites**
  Displays a bar graph illustrating the signal strength of the satellites in range of the terminal.

- **Logger**
  Demonstrates how GPS data collected by an app may be saved to a log file.
Using the Logger in the GPS Demo

1. Select the Logger tab from the GPS Demo screen.

2. Edit the following items or accept the defaults:
   a. File Name and Location
   b. Track Name
   c. Track Description
   d. Interval (secs)
   e. Track color

3. Touch **Start Logger** to begin collecting and logging GPS data.

4. Touch **Stop Logger** to finish collecting and logging GPS data

5. View the content of the log file by opening the file in a standard text editor.

Note: For information on using a USB connection to copy files from the terminal to a workstation (PC), see page 2-19.

Unpacking the HomeBase
Open the shipping box and inspect the package to see that the following standard items are included:
- One Dolphin HomeBase, model 70e-HB
- One power supply (see Power on page 11-5)
- One power cord

These items are needed to operate the HomeBase. If any items are missing or anything appears to be damaged, contact your Customer Account Representative. Keep the original packaging in case you need to return the HomeBase for service or to store the HomeBase while not in use.

Optional Equipment
A standard USB (Type A to B) cable is required when using the HomeBase for communication between the terminal and a host device.

Charging Overview
The base provides power to the intelligent battery charging system in all Dolphin terminals that senses when a full charge has been achieved and switches to a trickle charge to maintain the full charge. The base completes a full charge of the main battery installed in the terminal seated in the terminal well in 4 hours for the standard battery or 6 hours for the extended battery. The base completes a full charge of the battery pack in the Auxiliary Battery Well (see page 11-3) in 4 hours for the standard battery or 6 hours for the extended battery.

Note: Before attempting to use, charge, or replace the battery in the terminal, you should read the Guidelines for Battery Pack Use and Disposal on page 3-16.

We recommend use of Honeywell Li-ion battery packs. Use of any non-Honeywell battery may result in damage not covered by the warranty.
Communications

Reliable data communications at speeds of up to 480 Mbps can be transmitted by the base through the Hi-Speed USB port.

Note: These bases cannot be physically connected to each other - sometimes referred to as "daisy-chained".

Convenient Storage

The intelligent battery charging system makes this base a safe and convenient storage receptacle for your Dolphin terminal.

Capacity

The base holds one terminal and features an auxiliary battery well behind the terminal well that can charge a battery pack independently of the terminal well. This means that one base can charge two battery packs: the one installed in the terminal and a spare.

We recommend use of Honeywell peripherals, power cables, and power adapters. Use of any non-Honeywell peripherals, cables, or power adapters may cause damage not covered by the warranty.

The power adapter included with the base, converts the voltage from the AC power source to 12 Volts DC. **Use only a UL listed power supply, which has been qualified by Honeywell with output rated at 12VDC and 3 amps with the device.** The operating temperature range is -10° to 50°C (14° to 122°F). Honeywell recommends that you leave the base connected to its power source at all times, so that it is always ready to use.

⚠️ **We recommend use of Honeywell peripherals, power cables, and power adapters. Use of any non-Honeywell peripherals, cables, or power adapters may cause damage not covered by the warranty.**

**Connecting Power to the HomeBase**

1. Plug the A/C power cord into the power adapter.
2. Plug the power cable into the power connector on the back of the HomeBase.
3. Plug the A/C power cord into a grounded power source.
4. The base is now powered.
Charging the Main Battery

The base provides power to the Dolphin terminal and allows the charging of the terminal’s battery. The intelligent battery charging system incorporated into all Dolphin terminals prevents overcharging, which means that Dolphin terminals may be stored in the base indefinitely without damage to the terminals, battery, or the base. When the terminal is docked, the base completes a full charge in 4 hours for the standard battery or 6 hours for the extended battery.

For more information about Honeywell battery packs and how to check battery power levels in your terminal, refer to Battery (page 3-12).

To Power a Terminal and Charge its Main Battery

Ensure all components are dry prior to mating terminals/batteries with peripheral devices. Mating wet components may cause damage not covered by the warranty.

1. Install the battery pack in the terminal; see Install the Battery on page 2-1.

2. Slide the terminal into the terminal well. The Dock LED illuminates blue. Battery charging begins immediately if required by the Dolphin terminal.

Note: When the terminal is docked, the Battery Icon changes from 🍄 to 🍄 indicating the terminal is running on external power. Battery charging occurs in the background. When the Dolphin is removed from the base, the battery icon indicates the charge level of the battery, see Common Status and Notification Icons on page 2-8.

We recommend use of Honeywell Li-Ion battery packs. Use of any non-Honeywell battery may result in damage not covered by the warranty.

Charging a Spare Battery in the Auxiliary Battery Well

The auxiliary battery well located on the back of the base charges a spare battery independently of the terminal well. The Aux Battery LED on the front panel indicates the status of the battery in this well. Charge time is 4 hours for the standard battery pack or 6 hours for the extended battery pack; see Auxiliary Battery Well on page 11-4.

1. Insert the battery at an angle.

   Note: Align the battery contacts with the contacts inside the auxiliary battery well.

2. Snap the battery into place with a hinging motion. The Aux Battery LED lights orange during charging.

3. Use the AUX Battery LED to monitor the charging progress. The LED changes to green when the auxiliary battery has completed charging and is ready for use.
Communication

Dolphin terminals support USB communications out of the box. The base also supports USB communications via the USB port located on the back. The base acts as a USB device by interfacing the USB signals of the Dolphin terminal to the USB of the host workstation. Using a standard USB cable, the base’s USB interface allows the Dolphin terminal to communicate with a workstation.

Requirements

- A base powered by a power cable and power adapter cable
- A standard USB (Type A to B) communication cable

Setting Up and Connecting the Dolphin Terminal to the HomeBase

1. Connect power to the HomeBase (see Power on page 11-5).
2. Plug the USB communication cable into the USB port on the back of the base.

   Note: The Dolphin terminal should always be removed from the HomeBase when connecting or disconnecting the USB cable.

3. Connect the other end of the USB cable to the host workstation.
4. Insert the Dolphin terminal into the terminal well of the base. The Dock LED illuminates blue.
5. Touch Turn on USB storage when the USB Mass Storage screen opens.
6. The computer views the terminal as an external USB storage drive. You can copy, delete and/or move files or folders between the computer and the installed microSD card as you would with any other storage drive (e.g., cut and paste or drag and drop).
7. When you are finished transferring files, touch Turn off USB storage.

   Note: This base cannot be daisy-chained.

Mounting the HomeBase

Set the base on a dry, stable surface, such as a desktop or workbench near an electrical outlet. The user should be able to view and operate the Dolphin terminal while it is in the base. When choosing a mounting location, bear in mind that the location must allow users’ easy access to the Auxiliary Battery Well and the back panel of the HomeBase where the USB port and the power jack are located.

Optional DIN Rail Mount

A DIN rail (7.5 X 35 mm) may be installed on the bottom of the base to provide the optional security of mounting the base to a flat horizontal surface with hardware.

Additional Hardware

- DIN Rail, Qty. 1
- 3/16 in. dia x 5/8 in. long pan head screw, Qty. 2
• 1/2 in. OD x 7/32 in. ID x 3/64 in. thick washer, Qty. 4
• 3/16 in. dia nut, Qty. 2

Note: The items listed are for reference only. Final hardware selection is dependent on the material type and thickness of the mounting surface.

Installing the DIN Rail

1. Slide the DIN rail into the slot along the bottom panel of the base.

2. Use the appropriate hardware to secure the DIN rail to the desk or flat surface.

Communication

Establishing Ethernet Communication

Connecting the Dolphin Terminal to the eBase

By default, the Dolphin terminal is configured to obtain IP addresses automatically via DHCP server. This means that in most cases you would simply plug-and-play the unit.

1. Connect power to the eBase (see Power on page 12-5).
2. Plug the CAT-5 Ethernet cable into the RJ45 connector on the back of the eBase.
3. Plug the Ethernet cable into the network.
4. Insert the Dolphin into the terminal well. The Dock LED on the base illuminates blue.
5. Touch All Apps > Settings > Ethernet configuration.
6. Check the box to Turn on Ethernet. When an Ethernet connection is established the status icon changes from to at the top of the screen.

Troubleshooting

If the items on the Ethernet configuration screen are grayed out and not accessible, verify the base has power, the Ethernet cable is undamaged and properly installed to the base, there is an active network signal over the Ethernet cable, and the terminal is properly docked in the base.

Ethernet Configuration Settings

Instead of using the default DHCP assigned IP address, the Dolphin terminal can be configured to use a statically assigned IP address.

1. Touch All Apps > Settings > Ethernet configuration.
2. Select Ethernet configuration, again.
3. Select Static IP under Connection Type, and then input the IP address and any additional information based on your network configuration.
4. Touch Save.

Ethernet Proxy Settings

To set up a proxy to use when accessing your network with Ethernet:

1. Touch All Apps > Settings > Ethernet proxy settings.
2. Input the Proxy host name and Proxy port. If required, designate when to bypass the proxy.
3. Select Done.
Displaying the eBase and Terminal IP Address

Once the Dolphin terminal has been successfully connected to the network through eBase, the terminal uses the eBase IP address. The IP address can be used by any application on the Dolphin terminal. Touch All Apps > Settings > About Phone > Status to view the assigned IP Address.

Establishing USB Communication

Dolphin terminals support USB communications out of the box. The base also supports USB communications via the USB port located on the back. The base acts as a USB device by interfacing the USB signals of the Dolphin terminal to the USB of the host workstation. Using a standard USB cable, the base’s USB interface allows the Dolphin terminal to communicate with a workstation.

Requirements

- A base powered by a power cable and a power adapter cable
- A standard USB (Type A to B) communication cable

Setting Up and Connecting the Dolphin Terminal to an eBase

1. Connect power to the HomeBase (see Power on page 12-5).
2. Plug the USB communication cable into the USB port on the back of the base. Note: The Dolphin terminal should always be removed from the HomeBase when connecting or disconnecting the USB cable.
3. Connect the other end of the USB cable to the host workstation.
4. Insert the Dolphin terminal into the terminal well of the base. The Dock LED illuminates blue.
5. Touch Turn on USB storage when the USB Mass Storage screen opens.
6. The computer views the terminal as an external USB storage drive. You can copy, delete and/or move files or folders between the computer and the installed microSD card as you would with any other storage drive (e.g., cut and paste or drag and drop).
7. When you are finished transferring files, touch Turn off USB storage. Note: This base cannot be daisy-chained.

Mounting the eBase

Set the base on a dry, stable surface, such as a desktop or workbench near an electrical outlet. Be sure to provide enough workspace with good lighting for the user to view and operate the Dolphin terminal while it is in the base. When choosing a mounting location, bear in mind that the location must allow users’ easy access to the Auxiliary Battery Well and the back panel of the eBase where the USB port, Ethernet port, and power jack are located.
Optional DIN Rail Mount

A DIN rail (7.5 X 35 mm) may be installed on the bottom of the base to provide the optional security of mounting the base to a flat horizontal surface with hardware.

Additional Hardware
- DIN Rail, Qty. 1
- 3/16 in. dia x 5/8 in. long pan head screw, Qty. 2
- 1/2 in. OD x 7/32 in. ID x 3/64 in. thick washer, Qty. 4
- 3/16 in. dia nut, Qty. 2

Note: The items listed above are for reference only. Final hardware selection is dependent on the material type and thickness of the mounting surface.

Installing the DIN Rail
1. Slide the DIN rail into the slot along the bottom panel of the base.

2. Use the appropriate hardware to secure the DIN rail to the desk or flat surface.

Mounting the Mobile Base

Safety Precautions
Honeywell is not responsible for any damages caused to you, your vehicle, or other individuals due to the installation of the Dolphin Mobile mount.

Follow these safety precautions when mounting the mobile base:

⚠️ Do not mount the base in a location where it prevents safe operation of the vehicle and/or impedes the vehicle operator’s field of view.
⚠️ Do not mount the base in a location where the connectors on the bottom panel of the base are not easily accessible. Be sure to leave enough room for unrestricted cable connections.
⚠️ The Mobile base is intended for use in an enclosed space protected from the elements. Do not mount the Mobile base on external vehicle surfaces.
⚠️ Do not install the Mobile base in an air bag deployment zone. Honeywell assumes no responsibility of liability for injury or death because of car crashes and/or air bag deployment.
Installation

1. Push the suction cup base firmly to the windshield.

2. Flip the mounting lever down to secure the suction cup.

3. To adjust the angle of the bracket arm, twist the thumb screws counterclockwise to loosen the locks. Reposition the angle of the arm, and then twist the knobs clockwise to lock the arm into position.
4. Insert the power cable connector into the power jack on the Mobile Base.
5. Twist the cable connector 90° clockwise to engage the cable lock.

6. Plug the power adapter into the vehicle power outlet (e.g., cigarette lighter outlet)

**Charging the Main Battery**

The mobile base provides power to the Dolphin and allows charging of the main batteries in the terminal. The main battery charges in 4 hours for the standard battery or 6 hours for the extended battery. The intelligent battery charging system incorporated into all Dolphin terminals prevents overcharging, which means that terminal may be seated in the base indefinitely without damage to the terminal, battery pack, or the base.

For more information about Honeywell battery packs and how to check battery power levels in your terminal, refer to Battery (page 3-12).

**To Power a Terminal and Charge its Main Battery**

⚠️ Ensure all components are dry prior to mating terminals/batteries with peripheral devices. Mating wet components may cause damage not covered by the warranty.

⚠️ We recommend use of Honeywell Li-Ion battery packs. Use of any non-Honeywell battery may result in damage not covered by the warranty.

1. Install the main battery in the terminal; see Install the Battery on page 2-1.
2. Mount the Mobile base and install the power cable; see Mounting the Mobile Base on page 13-3.
3. Pull the spring latch back and insert the Dolphin 70e Black into the terminal well. Charging begins immediately if required by the Dolphin terminal.

Note: Align the contacts on the back panel of the terminal with the charging contacts on the Mobile Base.

Removing the Cable

⚠️ Attempting to remove the cable without disengaging the lock may result in damage to the base and power cable not covered by the warranty.

1. Twist the cable 90° counterclockwise to disengage the cable lock.

2. Remove the cable from the power jack.

Unpacking the ChargeBase

Open the shipping box and inspect the package to see that the following standard items are included:

- One Dolphin ChargeBase, model 70e-CB
- One power supply (see Power on page 14-4)
- One power cord

These items are needed to operate the ChargeBase. If any items are missing or anything appears to be damaged, contact your Customer Account Representative. Keep the original packaging in case you need to return the ChargeBase for service or to store the ChargeBase while not in use.

Charging Overview

The base supplies power to the intelligent battery charging system in all Dolphin terminals, which senses when a full charge has been achieved and switches to a trickle charge to maintain the full charge. As battery packs charge, the charging circuitry follows the two-step charging process (CC-CV) that is recommended for the battery type. The process monitors changes in temperature, current, and voltage. The main battery of each terminal charges in 4 hours for the standard battery or 6 hours for the extended battery.  

Note: Before attempting to use, charge, or replace the battery in the terminal, you should read the Guidelines for Battery Pack Use and Disposal on page 3-16.
